Global Forest Change v1.11 (2000-2023)

This map illustrates the forest canopy cover distribution in the Mont Mbam region for the year 2000, derived from the Hansen Global Forest Change dataset. The data represents tree canopy closure for all vegetation taller than 5 meters in height, providing a baseline understanding of the region's forest structure. This baseline map serves as a crucial reference point for assessing subsequent forest changes and degradation patterns.
